

## C# exercise

Monday, 23 March 2020 09:06

	Vending Machine
Fields	Coin Denominations
Methods	CalculateChange (purchase Amount, tender amount)

- Declare coin denominations
- Create a vending Machine Object from the coin denominations configuration.  
This object contains a field coinDenominations that determines the config. of Object created and a method to calculate the change based on that configuration
- Call the CalculateChange method to calculate the denominations and/or return the amount
